

## **Box Assembling Machine Model L**

The machine applies adhesive to the box, forms and presses the edges.

Top and bottom of carton can be made with minor adjustments.

Edges are sealed with Thermo Adhesive which guarantees a quick and secure bond.

The change-over time of the machine is minimal as only the hammer needs to be replaced for different type boxes.

The maximum size box that can be processed is 12" x 6".

Several different sizes can be made with the same hammer.

### **Production Data:**

2,000 units in eight hour day.

### **Engineering Data:**

Air consumption: .52 cubic feet free air per minute (15liter/min.)

Air pressure: 70 to 80 per square inch

Electricity: 110V, 60 cycles single phase

Weight: 209 lbs. (95kgs)

Dimensions: width: 20" (500mm)

depth: 40" (1,000 mm)

height: 44" (1,100 mm)
